BLUE 018 HD

HIGH DENSITY TRYPAN BLUE, 0,18%

TISSUE STAINING

BLUE 018 HD is 0,18% trypan blue with a thickening agent, packaged in prefilled syringes of 0,7 ml each, for reversible staining of retinal membranes. The product warrants a prompt and effective tissue staining, without any risks for the patient. The thickening agent improves the contact between the dye and the tissue, thus allowing a clear visualization of the retinal membranes, and simplifies the surgery, making superfluous the fluid/air exchange performed before the dye injection, in order not to dilute it.
